DETAILED ACTION

1. This is in response to applicant's amendment and response filed 9/10/04 in which claims 1-33 are pending.

Allowable Subject Matter

2. After further search and thorough examination the present application and in view of applicant's argument, Claims 1 through 33 are found to be in condition for allowance.

3. The following is an examiner's statement of reasons for allowance: the prior art Sherman (US 5,974,234) discloses a wireless, dynamically and autonomously reconfigurable link layered communication network and self optimizer's communication paths within the network. A plurality of communication nodes form the network with each node having a transceiver for receiving and with each node having a transceiver for receiving and transmitting messages (abstract).

On the other hand, the present application specifically discloses a transceiver employing on/off keying of a reference frequency continuous waveform, the transceiver receiving a keyed message on the reference frequency from another node and transmitting the received message on the reference frequency to a subsequent node, and controller controlling the operation of the transceiver to receive the message transmitted by another node and to transmit the received message to a subsequent node. These limitations, in conjunction with all other limitations of the independent claims, has not been found, taught or made obvious the prior of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
